Summary

Software Engineer with expertise in endpoint security solutions, backend systems, and infrastructure automation. Hands-on experience building standalone security agents and enterprise-grade workflows using Java and C++. Backed by a strong problem-solving background and an M.Tech in Computer Science from NIT Warangal

Education

National Institute of Technology Warangal 2023 – 2025
M.Tech, Computer Science and Engineering CGPA: 7.48

Institute of Engineering and Rural Technology 2019 – 2023
B.Tech, Computer Science and Engineering CGPA: 8.28

Experience

HCLSoftware (HCL Technologies Limited) Sep 2025 – Present
Senior Software Engineer I | BigFix Lifecycle Team

- Designed and implemented an automated **WDAC application-control workflow** integrated with BigFix, reducing policy deployment time by approximately **93%**, from **30 minutes to under 2 minutes**.
- Migrated an enterprise Java application from **Java 8 to Java 18**, updating application dependencies and resolving compatibility issues to support the upgraded runtime.
- Developed a standalone **Go-based WDAC Manager** for policy creation, rule management, XML generation, policy compilation, signing, deployment and verification without relying on PowerShell.
- Contributed to production issue resolution, feature development and testing for enterprise endpoint management capabilities in an Agile development environment.

Projects & Research

Enterprise Application Control Automation System
Go, BigFix ,WDAC, XML, Security Automation

- Designed and implemented an automated **WDAC application-control workflow** integrated with BigFix and built a standalone **WDAC CLI** supporting policy authoring, rule generation, XML-to-CIP compilation, signing, deployment, and verification, reducing policy deployment time by approximately **93%**, from **30 minutes to under 2 minutes**.
- Designed policy workflows supporting **base and supplemental policies**, enabling centralized policy authoring with controlled endpoint-level application enforcement.
- Implemented application allow/block rules based on **file hash, publisher certificate, file-attributes and file path** for different enterprise security requirements.
- Added support for **COM and Package based application control**, extending policy coverage beyond conventional executable rules.
- Integrated the solution with **BigFix Fixlet-based deployment workflows** to automate policy distribution and endpoint compliance operations.
- Added post-deployment validation and Windows Code Integrity event analysis to verify whether policies were successfully activated and applications were correctly allowed or blocked.

Software Fault Localization Using Deep Learning DOI:10.1007/978-3-032-16830-6_37
Research Publication | Springer CCIS, COCOLE 2025

- Developed a **Stacking Ensemble** combining Artificial Neural Networks (ANN), Convolutional Neural Networks (CNN) and Transformer architectures for automated software fault localization.
- Designed a multi-model learning approach to identify and rank potentially faulty program components from software execution data.
- **Improved fault localization accuracy by up to 60%** compared with conventional approaches.
- Evaluated the proposed approach using **EXAM_F, EXAM_L and EXAM Score** metrics across benchmark software datasets.
- Published the research in **Springer CCIS, COCOLE 2025**.

Technical Skills

Languages: C++, Java
Systems/Platforms: BigFix, WDAC, Application Control
DevOps/Tools: Jenkins, Git, Docker
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, CI/CD

Coding Activities & Achievements

- **LeetCode:** Rating 1725 (Top 11%)
- **CodeChef:** 4-star Coder (Max Rating 1900+)
- Solved **1000**+ problems across LeetCode, CodeChef, GeeksforGeeks and Codeforces.
- Qualified **GATE 2022** with AIR **1523** in B.Tech **3rd Year**.
